PROJECT FILE

NAME- HRISHI UPADHYAY
REG NO.- 25BCE10275
BRANCH- COMPUTER SCIENCE(CORE)
YEAR- FIRST YEAR (B.TECH)
COURSE CODE- CSE0001
DATE- 30/03/26

Introduction:-

This project explores digital literacy through hands-on tasks designed for students in a modern educational scenario. In an era where digital tools dominate learning and professional development, students face challenges like creating engaging content, building online profiles, practicing coding, improving communication, and staying safe from cyber threats. The scenario involves a Computer Science student navigating these tasks to enhance skills amid academic pressures, such as group projects and exam stress, using platforms like Canva, GitHub, LinkedIn, Kaggle, HackerRank, and Google Forms.

Project Overview:-

The project consists of five key tasks. Task 1 involves designing an infographic on digital literacy topics using Canva, covering definitions, tools, safety, online presence, and etiquette. Tasks 2-3 focus on profile creation on GitHub, LinkedIn, Kaggle; coding practice on HackerRank; and quiz design on Google Forms. Task 4 analyzes poor digital communication scenarios, like misunderstood group chat deadlines in projects, emphasizing clarity and confirmation. Task 5 reflects on cybercrime surprises, such as advanced phishing mimicking UPI alerts, and commits to safer habits like verifying via official helplines.

TASK-1:-

I created my infographic using Canva, which is a user-friendly design tool that offers a variety of templates, icons, and layouts for creating professional visuals. The design of my infographic focuses on **Digital Literacy for Students** and covers multiple important topics such as what digital literacy is, useful digital tools, safe internet practices, building a professional online presence, and email etiquette. Each section is clearly organized with headings, icons, and short points to make the information easy to understand and

visually appealing. I used different colors and sections to separate each topic, which helps the viewer quickly grasp the key ideas.

One thing I found interesting while making this infographic was how simple design elements like icons and colors can make information more engaging and easier to remember. However, I found it slightly difficult to balance the amount of information and design, as adding too much text made the slide look crowded. Overall, this activity helped me improve both my digital and creative skills.

TASK-2:-

I created and updated my profiles on GitHub, LinkedIn, and Kaggle as part of this task. These platforms are widely used by students and professionals to build skills, showcase work, and connect with others in the tech community.

GitHub is mainly used for storing and managing code, collaborating on projects, and showcasing programming skills. I plan to use it regularly to upload my academic projects, practice coding, and gradually build a strong portfolio over time.

LinkedIn is a professional networking platform where I have added my education details. Over the next four years, I aim to use LinkedIn to connect with peers, seniors, and industry professionals, share my achievements, and explore internship and career opportunities.

Kaggle is a platform focused on data science and machine learning, where users can work on real datasets and participate in competitions. I plan to use Kaggle to improve my skills in AI and machine learning by practicing regularly and participating in competitions.

Overall, these platforms will help me develop technical skills, build a professional identity, and prepare for future career opportunities.

TASK-3:-

For this task, I used HackerRank and Google Forms as my main platforms. On HackerRank, I practiced the Python Introduction challenges, which helped me strengthen my understanding of basic programming concepts such as variables, input/output, loops, and conditional statements. Solving these problems improved my logical thinking and coding skills, which are essential for my Computer Science course. It also gave me hands-on experience in writing efficient code and understanding problem-solving techniques.

On Google Forms, I created a Digital Literacy Awareness Quiz consisting of five questions, including multiple-choice and short-answer types. This helped me learn how to design surveys and quizzes, organize questions clearly, and use digital tools for data collection. I also understood how such tools can be used in academic and professional settings for feedback and assessment.

These platforms will help me academically by improving both my technical and practical skills. HackerRank will support my coding practice and preparation for exams and placements, while Google Forms will help me in conducting surveys, collecting data, and presenting information effectively in projects.

TASK-4:-

A common situation where poor digital communication can cause problems is in academic group projects. For example, a team of students was assigned an important project, but one member misunderstood a message in the group chat about the submission deadline. The message was unclear and lacked proper details, leading the student to submit their part late. As a result, the entire group lost marks, causing frustration and conflict among team members.

This issue could have been avoided with clearer communication. The sender should have mentioned the exact deadline, time, and expectations in a structured way. Using proper language, confirming understanding, and possibly sharing the information

through multiple platforms like email or a shared document would have helped. Additionally, team members could have asked questions if anything was unclear. This highlights the importance of clarity, professionalism, and confirmation in digital communication.

TASK-5:-

While researching cybercrime and digital safety, what surprised me most was how sophisticated phishing attacks have become—they now perfectly mimic legitimate bank UPI notifications and college portals, targeting students during exam stress when we're least cautious. I assumed college Wi-Fi was safe, but discovered public networks are prime hunting grounds for data theft.

As a result, I'll personally change my habit of clicking "urgent" links in WhatsApp group messages without verification. From now on, I'll always call the official helpline (1930) or visit bank apps directly for any account alerts. This simple shift could prevent the ₹45,000+ losses we see in student cases.

Conclusion:-

This project significantly boosted digital and creative skills, preparing for academic success and careers in tech. Key takeaways include balancing design with content, leveraging platforms for portfolios and networking, and prioritizing clear communication and cybersecurity to avoid common pitfalls like data theft on public Wi-Fi. Overall, it underscores digital literacy's role in thriving in a connected world.
